Detailed Action

Response to Argument

1. Applicant's arguments see amendment filed on October 27, 2005, with respect to claims 1, 13, 23, 32, 38, 41 and 44 have been fully considered and are persuasive. The rejection of claims 1-4, 6, 8, 10-19, 21, 23-34, 36-38, 41, 42, 44 and 45 has been withdrawn. The Examiner acknowledges the amendments to the drawing and a formal drawing incorporating the changes noted in the annotated drawing should be submitted before issuance.

Allowance

2. Claims 1-45 are allowed. The following is an examiner's statement of reasons for allowance:

In reference to claims 1, 13, 23, 32, 38, 41 and 44: Xu (U.S. PAP 2004/0117682) in view of Hou et al. (IEEE Article, 'Incorporation of Optimal Timeouts into Distributed Real-Time Load Sharing') does not teach that writing one of the timer values for each of the connections to a global timer array. The global clock counter of Xu stores only a single global clock counter value. This clock counter is not an array of multiple timer values. The global clock counter of Xu does not store timer values written from a connection table. Further, Hou et al. does not disclose how timeouts are grouped, written or stored; Hou is concerned with

determining or calculating timeout values for distributed processing tasks rather than a method in which each one of the active connection is associated with a plurality of timers. Xu and Hou et al. does not further teach the method of restarting timer values when date is communicated in relation to a predetermined time interval.

The remaining claims are dependent upon 1, 13, 23, 32, 38, 41 and 44 and contain further limitations.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
